Software Engineer with 2+ years of experience building full-stack and real-time IoT applications using Angular, Spring Boot, MQTT, and message queues. Experienced in backend optimization, database tuning, and production systems in the oil & gas domain.

WORK EXPERIENCE

Software Engineer J317	Oct 2025 - Present HCMC, VietNam
- Led the design and development of key full-stack features — Casing Test charting module (real-time wellbore pressure via MQTT), SSR-based report generation, and FracLoader — cutting report generation time from days to hours. - Identified performance bottlenecks and independently redesigned the data-fetching flow, consolidating redundant API calls and reducing dashboard load time from over a minute to under 10 seconds. - Contributed to the team's migration of the real-time sensor pipeline from Kafka to RabbitMQ, improving server performance by 30%+ and lowering resource usage. - Optimized MongoDB query performance via indexing and algorithm refinement, enabling reliable real-time processing at higher data volumes. - Led unit testing and contributed to design/code reviews, reducing regression bugs and improving code quality.	
Full Stack Developer NewTech	Mar 2024 - Oct 2025 HCMC, VietNam
- Started as an intern and was retained as a full-time developer after demonstrating strong performance. - Resolved a critical security vulnerability through input validation and sanitization, preventing potential data breaches. - Optimized backend API calls with the backend team, improving server response time by 20%. - Integrated a third-party analytics tool to track user behavior, increasing user retention by 25% through data-driven design improvements. - Introduced a distributed logging system to enhance troubleshooting capabilities, reducing system downtime by 25%.	

PROJECTS

EVOEDGE & EVOAUTOMATE	Oct 2025 - Present
Description: Developed EvoEdge and EvoAutomate — real-time sensor monitoring and automated Post Job Report generation with configurable well/client templates. Team Size: 5 Responsibilities: Full-stack development, UI/UX for real-time dashboards, and configurable report system design. Technologies Used: Angular, Spring Boot, MQTT, RabbitMQ, Kafka, MongoDB.	
ENHANCE CREDIT SCORE WEBSITE 	Jul 2025 - Oct 2025
Description: Developed a credit score lookup app (CMND/CCCD) with factor analysis and LLM-driven data retrieval. Team Size: 5 Responsibilities: Full-stack development, UI/UX design, Dev-ops, Integrate AI models into the system. Technologies Used: AWS S3, Flask framework, Render free tier(CI/CD).	
TRAFFIC LIGHT MANAGEMENT SYSTEM	Feb 2025 - Jul 2025
Description: Developed an IoT traffic light system with real-time monitoring and manual/auto/SOS control modes. Team Size: 4 Responsibilities: Full-stack development. Technologies Used: ASP.NET Web API, Angular, SQL Server.	

EDUCATION

Engineer of Information Technology	Jan 2020 - Oct 2025
Ho Chi Minh City University of Industry and Trade	GPA: 3.44/4.0
Won first prize, 2024 Faculty Scientific Research Competition; received merit-based scholarships (2022-2023).	

SKILLS

Languages: C#, Java, TypeScript, JavaScript, Python.
Frameworks & Libraries: Angular, Spring Boot, ASP.NET (MVC, Web API), Flask.
Databases & Message Queues: MongoDB, SQL Server, RabbitMQ, Kafka, MQTT.
Tools & Infrastructure: AWS S3, GitHub, GitLab, Bitbucket, SourceTree.

LANGUAGES

English (TOEIC 750) (Professional working proficiency)

CERTIFICATIONS

VPBank Hackathon Certificate of Participation  by VPBank	Aug 2025
hackhcmc Certificate of Participation  by AngelHack Corporation	Jul 2024
